KanaLocks

KL201-type (Flange, Small Outer Diameter Type)

● Order No. Example

KL201 8×21

The KL201-type, in addition to the features offered by the conventional KL201FH-type, allows a more compact design because the ratio of inner/outer diameter has been made smaller. Additionally, since a slit has been put in at a single location for each of the inner ring/outer ring, it can handle a broad range of axis tolerances. Boss hole (m6, k6, j6, h6 to h8) and shaft fit is up to H8.

 Special Structural Steel
